**DOWN TO WORK FOR XYLEXPO 2026:  
“EARLY BIRD” UNTIL NOVEMBER 30 AND A RICH AGENDA OF EVENTS**

Many Italian and international companies have already submitted their registration to the next edition of **Xylexpo 2026**, the biennial international exhibition for the wood and furniture industries scheduled at FieraMilano-Rho **next June 9 to 12**. The early-bird benefits offered to companies registering within November 30 have worked also this year, driving many companies to speed up their registration despite the “wait-and-see” mood that is affecting also the global industry of technology for wood and furniture.

*“The next edition of Xylexpo – said exhibition director **Dario Corbetta** – will keep its promise of setting up an international event that provides a clear view of “made in Italy”. The event will have a dual approach: on one side, a place where Italian companies have their own “home exhibition”, what we now call the “comfort zone”; on the other, an opportunity for companies from all around the world to get directly in touch with the Italian market, one of the most relevant on a global scale.”*

The focus topics for the events scheduled during the four-day exhibition are set. The first day will be dedicated to **wood construction**; the highlight will be the first edition of **Holzbau Forum Italia** at Xylexpo, presenting an agenda focused on the closer and closer integration of technology, design and construction. The topic of the second day will be **drying**, featuring the presentation of the new **“Drying handbook”** by Conlegno and the University of Florence. On day three, the spotlights will be cast onto **finishing** technology and products, while the last day will be dedicated to **tools**. The agenda will include more events, presentations, interviews, testimonials and insights in collaboration with institutes, universities and experts.

A rich calendar is also being defined for **Composites Future**, the expo & conference dedicated to technologies and materials for composites, making its debut In Hall 18 in collaboration with **Plast**, the exhibition of technology for the plastic and rubber industry, held concurrently. The morning program for Wednesday 10, Thursday 11 and Friday 12 will feature the **“Composites Future Academy”**, talking about materials, modeling of innovative materials and the related technology. On the same days, the afternoon session will be dedicated to the **“Composites Future Demo Area”**, offering the opportunity to experience the production of composite materials and presentations of modeling and processing methods for composites.
